Description S. Parker 1279 series ball bearing template butt hinges are made to genuinely close tolerances to fit standard template cutout and screw hole locations in hollow metal doors and metal frames manufactured to conform to a similar template. Hinges also meet applicable ANSI (American National Standards Institute) dimension standards. Full mortise template hinges fit snugly and trimly in wood or hollow metal doors with pressed metal or wood jambs. Hinges are loose pin, unless otherwise stated, and are fully swaged for smooth operation, and long life. 4 1/2" x 4 1/2" hinges are .134" (more than 1/8") thick for extra strength For heavier duty applications, with higher opening frequency, ball bearing hinges keep doors opening smoothly for a long time. Ball Bearing Steel, Loose Pin. Dull Chrome Plated
