Description **PROBLEM:** The free-floating fickle fingers found inside an IC lock must be perfectly perpendicular or the placement of the core cannot be correctly completed. ? **SOLUTION:** This dual-end tool is designed to fit standard (.500") and large format (.550") interchangeable core housings. It grabs onto the two fingers of the tail piece and allows you to position them for easier core insertion. This tool will speed up re-keying and eliminate a great deal of frustration.
