Description The design of some vehicles makes it difficult to insert an Air Wedge? behind the door. The Lever Wedge? makes it easy to still open these vehicle. It is designed with two pivot points that allow you to spread a door from its frame and then, with a simple push, wedge it open! Once in place the door can be separated farther with the HPC Lever Wedge's secondary lever operation. With this tool no other wedge is needed to hold the door in place after prying it open. An essential tool for every service vehicle!
